# HOTELIA

## Hotelia - All Collections

Current MongoDB / Mongoose schemas | 14 collections | 32 logical references | 2026-10-14

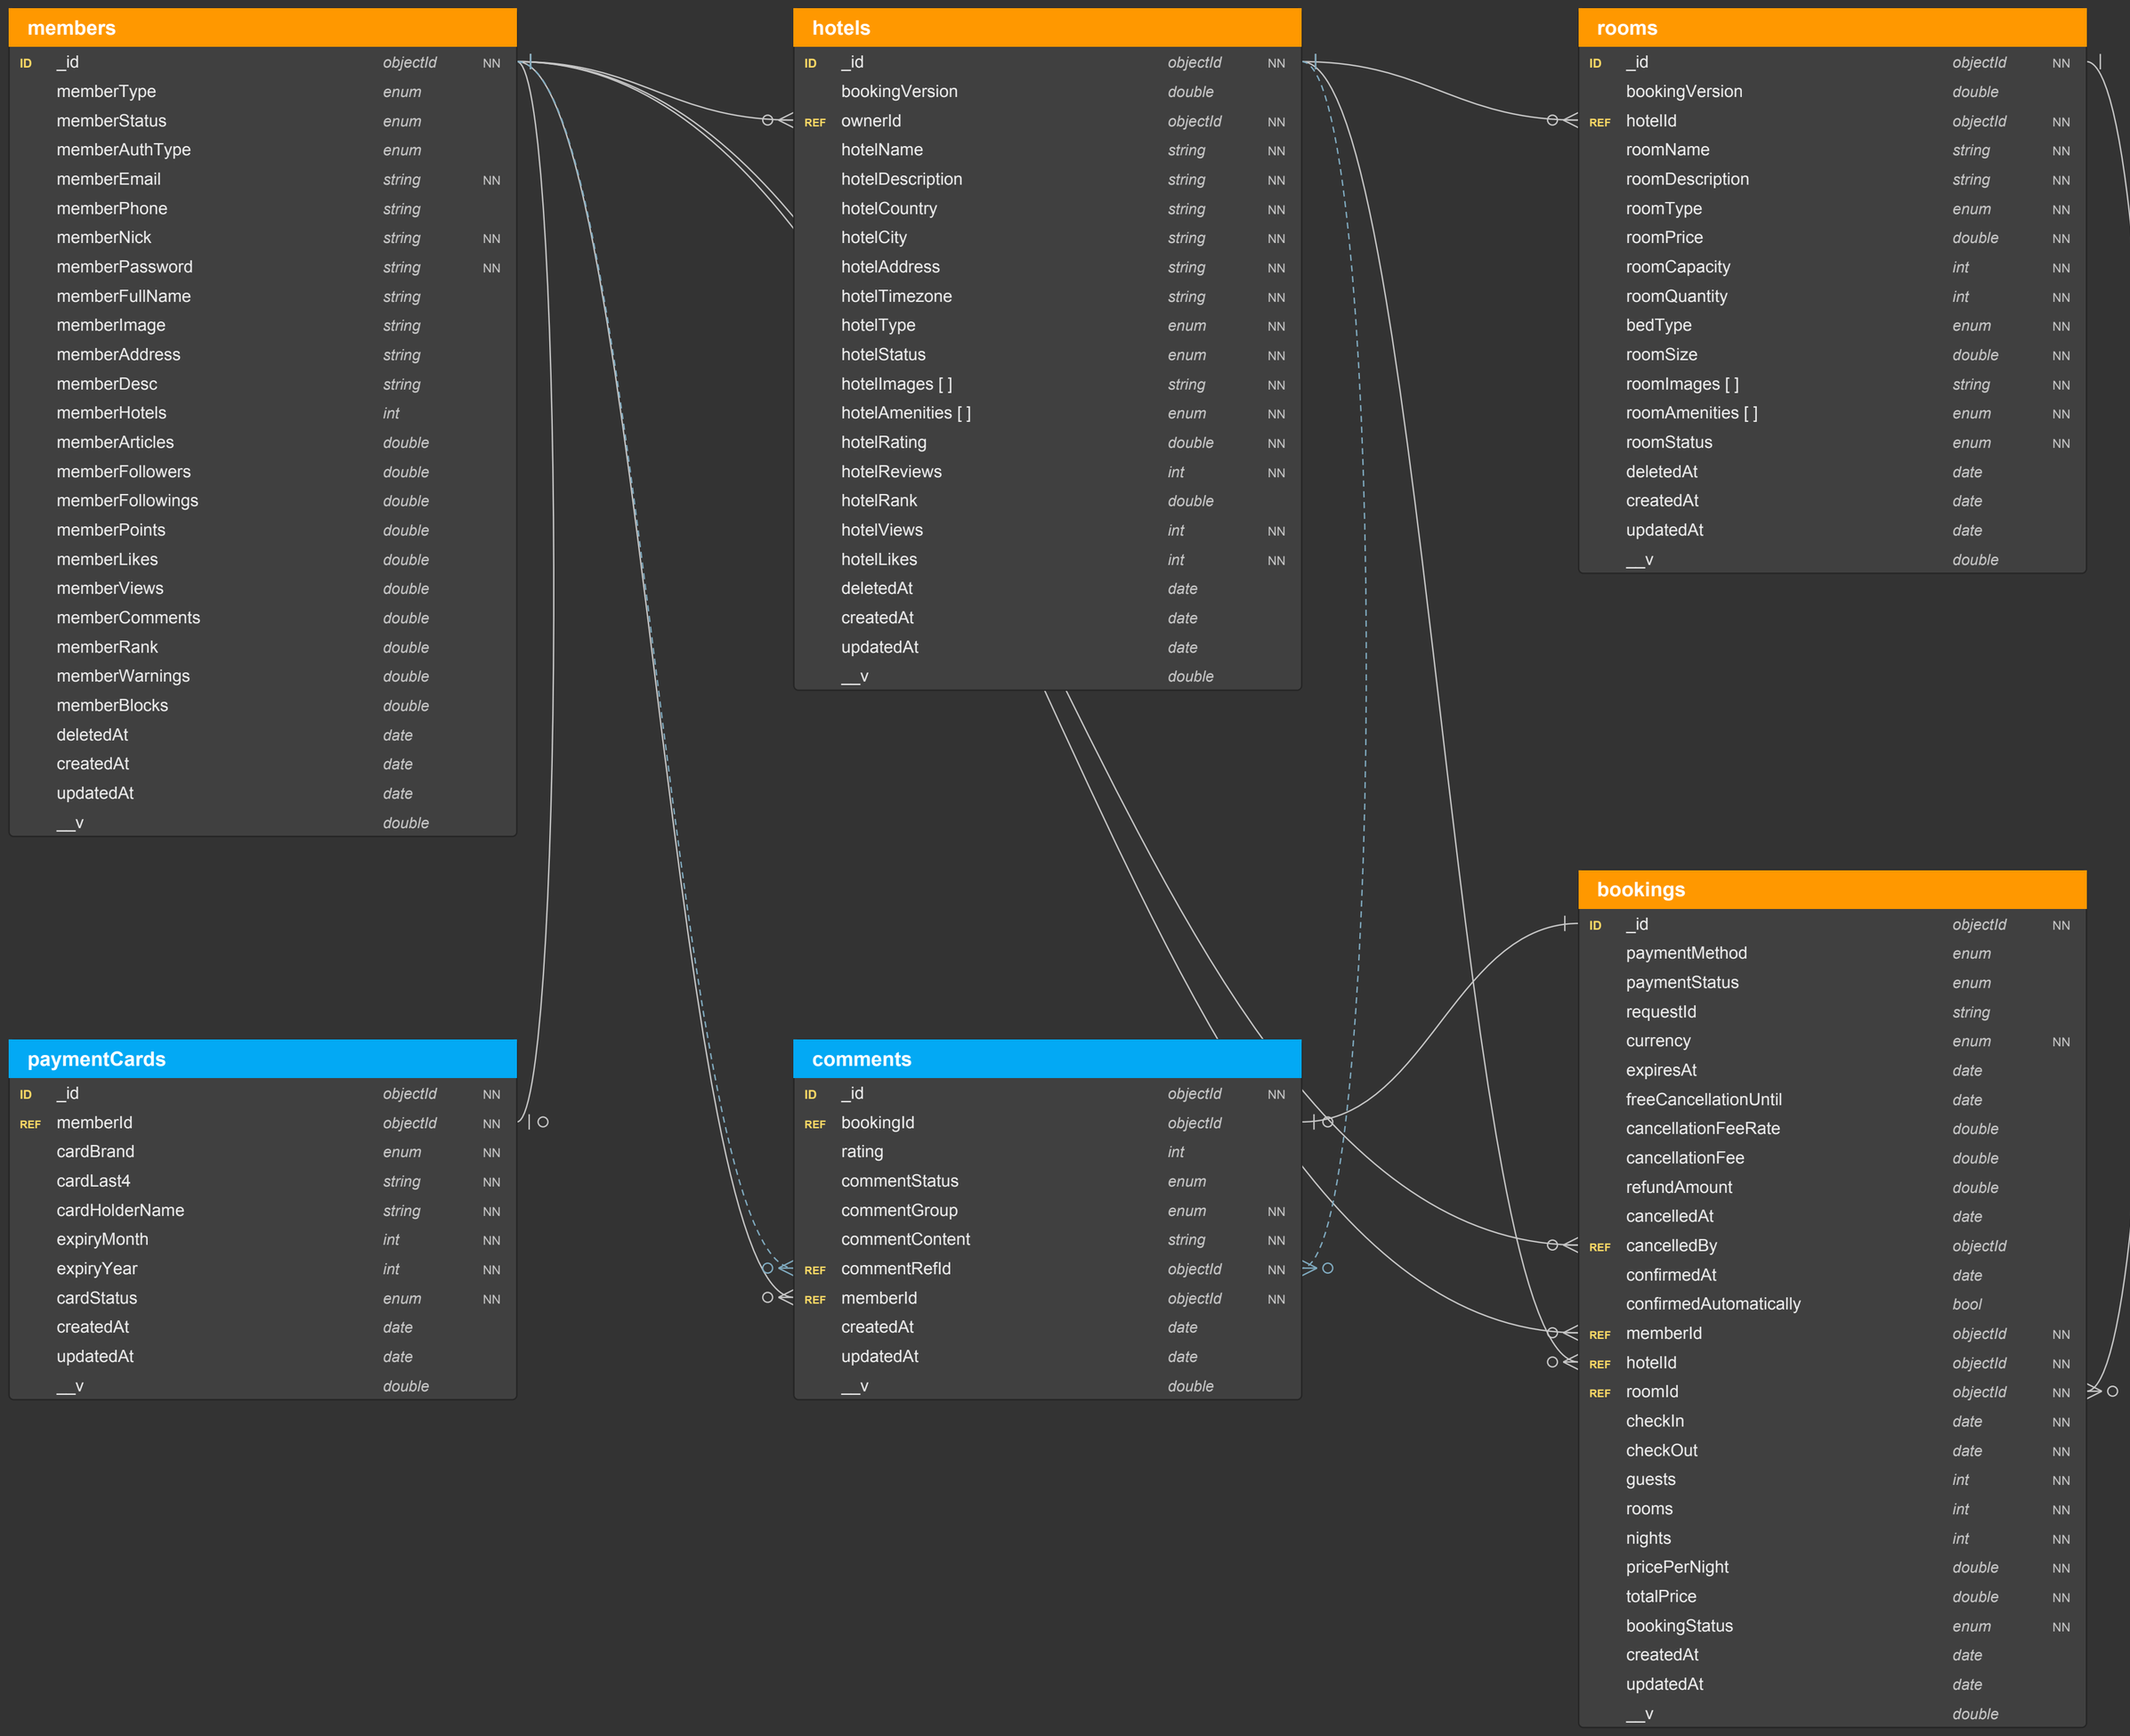

## MODEL RULES

Orange: members, hotels, rooms and bookings. Blue: supporting collections. ID = primary identifier; REF = logical reference; NN = schema required:true.
Dashed blue references are polymorphic alternatives selected by commentGroup / likeGroup / viewGroup. MongoDB references are not SQL foreign-key constraints.
Hotel favorites use likes (HOTEL). Hotel reviews use comments (HOTEL), a completed bookingId and rating 1-5. No separate favorites or reviews collection.
Availability uses [checkIn, checkOut): requestedCheckIn < existingCheckOut AND requestedCheckOut > existingCheckIn. Reserved rooms cannot exceed roomQuantity.
Backend calculates nights and totalPrice in USD. Free cancellation for 15 minutes; automatic confirmation afterward; later guest cancellation fee is 5%.
paymentCards stores private demo metadata only: no full card number, CVV or real charge. A member can have at most one demo card.
int denotes whole-number validation; double denotes a Mongoose Number. __v is the automatic Mongoose version key. Default values and exact indexes are in model descriptions.
